

CREA-WHEEL – now for round and angular material

The CREA-WHEEL straightening machine extends the range of applications: In addition to flat material, round and square bars can now also be straightened precisely - quickly, efficiently and without additional equipment.

The CREA-WHEEL has established itself as a reliable and efficient solution for metal processing. A new attachment expands the machine's range of applications: round bars and square bars in the 10 to 16 mm range can be straightened just as easily and precisely as flat material. The upgrade can be easily added to existing machines and does not require any major additional effort, while the central setting mechanism of the CREA-WHEEL remains unchanged, which ensures ease of operation.

The upgrade makes the machine a versatile solution for workshops that process flat, round and square material. This enables greater flexibility and efficiency without having to switch to a new machine. With a focus on resource conservation and sustainability, the existing equipment is complemented by a modular system.

CREA  WHEEL

At a glance

- Now straightens round bars and square bars (10-16 mm)
- No additional device required
- Easy installation of the attachment
- Upgrade for existing machines
- Proven user-friendliness
- Resource-saving and sustainable solution
